

SMOKER ø 100 mm

With wire heat shield

Ref. 3840

MAIN ADVANTAGES

- Long lasting
- Made In Italy
- Easy to use
- Protection against burns

TECHNICAL DATA

- **Diameter:** 100 mm
- **Weight:** 1 kg
- **Fabrication:** Stainless Steel
- **External bellow:** Vinyl

DESCRIPTION

Professional **smoker** in **stainless steel**, ø 100 mm, with **vinyl leather bellows**, complete with protection cage that makes it extremely safe against burns.

Designed and built on the **ORIGINAL LEGA design** from the 1960s, the stainless steel smoker means quality of construction and durability. The metal cage around the smoker guarantees **excellent protection** against burns.

The front hook allows you to comfortably "hook" the smoker without having to place it on the ground, avoiding burning the surfaces and for easy storage. The external bellows allow the air to reach the fuel from below, because the air inlet hole of the boiler is located in the lower part of the smoker.

Solid and long-lasting tool, built to last. The top dome opens using a lever incorporated into the dome itself, allowing you to conveniently open the smoker with one hand.

This tool is suitable for both more experienced beekeepers and beekeepers who are just starting their adventure, because the external heat shield makes it safe and perfect even for novice beekeepers.

The smoker is made and assembled inside the LEGA factories, which guarantee Made in Italy quality, but above all Made in Lega.
