

VitaHive™ Power Feed™ Patties

New High Consumption formula

**BUILD STRONG HIVES
WITH OUR NEW HIGH
CONSUMPTION
FORMULA**

We've listened to our Beekeepers' feedback requesting a higher moisture patty. In response to this, we've developed a new recipe that bees love. In trials with commercial customers, we've seen increased speed of uptake and minimal leftover, meaning stronger hives, faster and a better return on your investment.

**IMPROVES
HEALTH**

**BOOSTS COLONY
STRENGTH**

**MADE IN
NEW ZEALAND**

**NO ANIMAL
PRODUCTS**

How to use:

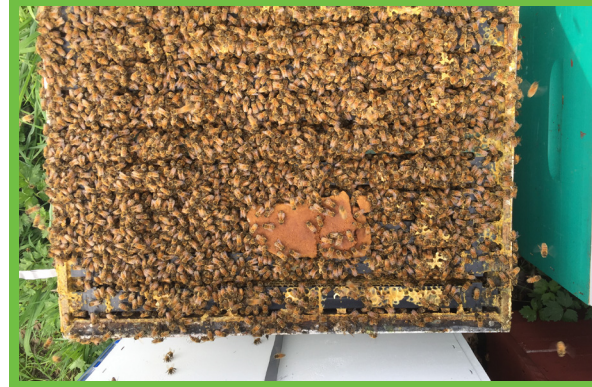

Place **Power Feed** patties directly onto the top bars of the lowest brood chamber. Placement in proximity to the brood area improves uptake and benefit.

Leaving wax paper on will not affect uptake or harm your bees, however this should ideally be removed before placement in the hives.

NOTE: Care should be taken to ensure patties do not fall between frames and onto the bottom board. As with any food product, these pieces may attract rodents which could result in damage to the hive.

Power Feed patties can be frozen and stored for up to 1 year. Thaw patties slowly at room temperature by removing them from the freezer 1-2 days before use. Frozen patties may break or crumble when being moved. them to thaw fully for easiest handling. Do not use frozen patties in beehives.

lower feeding
costs***

VitaHive™ Power Feed™ Patties

New High Consumption formula

Power Feed Product Summary

- ✓ New high consumption formula
- ✓ Balanced amino acid profile and plant based proteins
- ✓ Advanced milling techniques deliver significantly smaller particle sizes than traditional bee feed products* resulting in improved bio-availability and nutrition
- ✓ pH balanced for preservation and bee palatability
- ✓ GMO free
- ✓ Free from soy and indigestible sugars
- ✓ NZ made and manufactured
- ✓ Rigorous quality control using accredited NZ laboratories
- ✓ Excellent uptake in feeding trials

* 85% of particles measured less than 108 microns
