

RADIAL EXTRACTOR «IBIS»

With TOP motor and stainless steel cage

Ref. 4748STY

- 16 Langstroth frames

MAIN ADVANTAGES

- Food grade stainless steel for professional use
- Made In Italy
- TIG welded
- Stability and sturdiness of the legs
- Powerful motor
- Easy to clean
- Total recovery of honey
- Straightforward to use

TECHNICAL SPECS

- **Reference:** 4748STY
- **Manufacture of the tank:** Inox AISI 304
- **Manufacture of the cage:** Food grade stainless steel
- **Manufacture of the lid:** Polycarbonate
- **Type of motor:** TOP
- **Manufacture of the honey gate:** Hostaform
- **Extractor's dimensions:** 760x760x780(h) mm
- **Extractor's diameter:** 700 mm
- **Honey gate's diameter:** 40 mm
- **Extractor's weight:** 32 kg
- **Cage:** Radial
- **Capacity:** 16 Langstroth frames

DESCRIPTION

The "IBIS" motorised radial honey extractor is one of the LEGA family.

The **tank** is made of **AISI 304 food-grade stainless steel** and TIG welded: it thus allows hygienic production of honey. The material is also extremely durable and the extractor easy to clean after use.

The straight shape of the **legs** (removable), made of sturdy iron and painted in the typical LEGA red color, gives the extractor the necessary stability during processing, also thanks to the rubber balance feet.

The **honey gate** is made of **food-grade plastic** with \varnothing 40 mm. The **cage** is of **food-grade stainless steel** with \varnothing 670 mm and height 382 mm.

The **TOP motor**, mounted on a steel bar between two transparent half-covers, has a **powerful 180 W motor**. It has **reversed rotation** and the **ramp** is **controlled in acceleration and deceleration** by an electronic board.

The "IBIS" radial honey extractor can extract:

- 16 Langstroth frames

This type of product is therefore recommended for beekeepers with few hives who do not want to give up the LEGA style anyway.
