

WAX MELTING TANK – 70 lt

Double wall stainless steel

Ref. 7411

MAIN ADVANTAGES

- Long lasting
- Made In Italy
- Easy to use
- Double usage

TECHNICAL DATA

- **Manufacture:** stainless steel AISI 304
- **Internal diameter:** 350 mm
- **External diameter:** 470 mm
- **Internal height:** 650 mm
- **External height:** 750 mm
- **Capacity:** 70 lt
- **Double wall capacity:** 50 lt
- **Absorption:** 1,000 W
- **Weight:** 28 kg

DESCRIPTION

The wax melting tank is the ideal tool if you have got a considerable amount of wax and you are about to produce some wax laminated sheets or candles. It has a double wall where you can put some water – thanks to a **thermostated electric heating**, the water heat melts the wax that was previously put in the tank.

The melted wax drips through the tap and gets collected in any bucket, ready to be used.

The **temperature is controlled manually and goes from 30° to 120° C.**

Particularly suitable for those who have to produce candles and wax shapes with silicone molds.

This wax melting tank can also be used as a wax sterilisator if you put some diathermic oil in the double wall: it can hold **up to 50 lt of oil.**
